

Daoyuan Han 韩道元 is graduate student in Mathematics at Brandeis University. In his own words: “I’ve always been interested in the interplay between geometry and topology, especially the problems concerning metric and topological invariant. The subject I’m studying now is the Seiberg-Witten theory and what I’m shooting for is to try to apply similar construction to derive topological invariant in other settings. Ricci flow, however, inspired me for the first time and encourage me to pursue math after medical school, remains a hobby to me.” Daoyuan will be a Mathcamp Coach for Analysis/Topology. We are happy he can join us.
